

Exercise: Storage in a research data management system

Local Data Hub registration:

<https://ldh.imise.uni-leipzig.de/>

Create a new user and set your password.

1. Institution and project

Search for the institution "*Institute for Medical Informatics, Statistics and Epidemiology (IMISE)*". Which projects are listed under this institution?

Now navigate to the project "*MI-Lab*".

2. Creating an investigation

Add a new investigation called "*Medical Information Mart for Intensive Care (MIMIC)-IV*" under the "MI-Lab" project.

2.1. Extended metadata schema

Select the extended metadata schema "MIAPPE metadata v1.1" and add the required metadata for the investigation.

The documentation can be found here: <https://help.datahub-usecase.elixir-belgium.org/tech/extended-metadata>

2.2. Access rights

Configure the access rights to this investigation so that only people from your project can access it.

Why are there access rights for clinical trials?

Why should not all data from a clinical trial be made publicly available?

3. Creating a study

Add a new study called "*MIMIC IV Study*" under the investigation you have already created.

3.1. Extended metadata schema

Select the extended metadata schema "*MIMCT Metadata V0.7 for object type Study*" and add the required metadata.

3.2. Access rights

Define the access rights for the study so that only people from your project can access it.

4. Creating an experimental assay

Add a new experimental assay "*MIMIC IV Clinical Dataset*" to your study. Then upload the following files that are available for this study:

4.1. Publications

Click Create and add multiple publications. The PubMed IDs are:

[36596836](#) and [36688534](#)

Link the publications to the study you have already created.

4.2. Documents

Add several documents under the experimental assay you have already created. These are available on GitHub under "Material/Documents":

MIMIC IV FDMP

MIMIC IV study protocol

MIMIC IV Data Quality Rules

MIMIC IV Data Dictionary

Edit the access rights for the files so that only people from your project can view and download them.

Why should these documents be uploaded in addition to the data set?

What are these documents used for in a clinical study?

4.3. Data set

Add the MIMIC IV data set under the experimental assay you have already created. This can be found in GitHub under "Material/Dataset":

MIMIC_IV_Dataset.csv
